

Detect deformation activity in real time with the Event Detection Solution

Assign a task to a person or team

SMS/email/phone alert

Switch a camera on

Activate siren

Traffic lights

1

Obtain more frequent data readings automatically when a threshold is met through the **Tilt90-x wireless tiltmeters** for the **Event Detection Solution**.

2

Detect deformation and displacement activity in real time* and automate your early warning system through the **notifications sent via MQTT to your proprietary or 3rd party software**.

3

Remotely manage and monitor your network and all deployed devices either **on-premise or through the cloud through a gateway sending data to the Connectivity Management Tool (CMT)**.

*Latency under 2 seconds for the first five tiltmeters that reached a threshold simultaneously and under 5 seconds for the first 25 tiltmeters. Latency between the event and publishing the message through MQTT. Worldsensing can provide 99% of the event messages within these values.
